Modification history

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.
FWPHAR3XXX	Conduct mechanical processor operations
Application	 This unit of competency describes the skills and knowledge required to operate a wheeled or tracked mechanical processor to process trees, and to segregate and stack logs in a commercial forest harvesting environment. The unit applies to individuals who operate a wheeled or tracked mechanical processor as part of forestry operations. No licensing, legislative or certification requirements apply to this unit at the time of publication.
Prerequisite Unit	Nil
Unit Sector	Harvesting (HAR)

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for mechanical processor operations	 1.1 Determine job requirements from work order or instruction, and where required, seek clarification from appropriate personnel 1.2 Confirm production targets and assess wood flow requirements to ensure efficient machine operation and overall productivity 1.3 Confirm safety and environmental requirements for the task according to workplace procedures 1.4 Identify, assess and take actions to mitigate risks and hazards associated with machine operations 1.5 Identify emergency plan procedures to follow in the event of an incident or accident 1.6 Select equipment appropriate to work requirements and check for operational effectiveness 1.7 Identify access to tree or log to be extracted and assess working conditions for safety 1.8 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the work place
	1.9 Plan mechanical processor operations according to workplace procedures, environmental and heritage concerns
2. Operate equipment	 2.1 Conduct pre-operational checks on equipment and attachments according to manufacturer recommendations and workplace procedures 2.2 Establish and maintain communication with other personnel to ensure safety according to safety requirements 2.3 Detect site hazards associated with processor operations and use safe operating techniques to minimise risk 2.4 Operate mechanical processor within equipment capabilities and limitations, and manoeuvre to ensure safe and efficient operations 2.5 Adjust operating techniques to meet work requirements and site conditions

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3. Process individual trees	 3.1 Monitor movement and whereabouts of other personnel to ensure safety 3.2 Plan processing to ensure minimal tree damage and maximum recovery 3.3 Position equipment for stable and safe access to felled tree and to ensure loads are placed within rated load/reach capacity 3.4 Program or modify processing controller to produce standard length and diameter of logs with optimal grade and length combination according to work plan requirements 3.5 Adjust processing techniques in response to unexpected characteristics, movement or condition of tree 3.6 Move timber/stems to pre-bunching site ensuring personnel safety and minimal damage to the timber and surrounding environment 3.7 Move equipment over pre-arranged routes with minimal damage to the environment
4. Segregate and stack logs	 4.1 Locate stacks to provide appropriate space for the conduct of other landing operations in line with planned layout and workplace requirements 4.2 Position and construct log stacks to provide stability and minimise problems from slippage and falling of logs 4.3 Carry out maintenance of log stacks according to planned layout and workplace requirements 4.4 Visually assess delivered logs and direct/move to appropriate location for further processing or stacking
5. Carry out machine operator maintenance	 5.1 Follow equipment lock-out procedures according to workplace health and safety requirements and workplace procedures 5.2 Conduct visual inspection and fault finding procedures according to manufacturers' recommendations and workplace procedures 5.3 Conduct routine operational servicing to maintain optimum operational performance of equipment 5.4 Diagnose faults, malfunctions or problems with equipment and report according to workplace procedures 5.5 Clean and store equipment, attachments and other ancillary equipment 5.6 Record and report mechanical processor operation results according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	cill Description	
Reading	 Read and understand production plans and workplace safety and environmental management plans in a forest harvesting environment Read and understand standard operating procedures and/or manufacturers instructions for the operation of forest harvesting machinery 	
Writing	Record operation, production and machine maintenance on paper based or electronic media	
Oral Communication	Interact verbally and non-verbally using agreed systems and processes to communicate with others on site to ensure safe and effective machine operations	
Numero	Use technical language directly relevant to role	
Numeracy	 Interpret gauges relevant to safe operation of harvesting machinery Estimate dimensions and angles of a stable log stack Estimate weight of logs to determine loading requirements and compliance to machine specifications

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions: • physical conditions:

	 skills must be demonstrated in a forest or wood products work environment or an environment tha accurately represents workplace conditions
•	resources, equipment and materials:
	log landing site
	wheeled or tracked mechanical processor
	 log sheets for recording measurement and operation
	 personal protective equipment suited for operation of a mechanical processor
•	specifications:
	 access to workplace health, safety and environmental policies and procedures applicable to mechanical processor operations
	access to workplace policies and procedures for operating a mechanical processor
	access to workplace emergency procedure.
